

MOLLOPLAST-B

Very Essential - Always Beneficial

Molloplast-B is a permanently soft, silicone-based, heat cured denture material. It can be used to fabricate new dentures or to reline existing dentures. Molloplast-B can also be used for covering major defects due to malformation or surgery.

It is wetted by saliva over its entire surface and as a result of its high elasticity it moulds itself to the mucosa during mastication.

Because it is permanently soft, Molloplast-B affords the patient greater comfort and security during uncertain times. Provide the most comfortable soft-liner for your denture patients and prescribe for patients with malformation or oral surgery.

*Permanently, Soft relining material for comfortable long term wear.
Clinically tested and Scientifically Documented!*

NEW

**NEVER GRIND OUT
YOUR RELINE AGAIN!**

New Molloplast-B Remover

For fast and secure dissolution of the bonding between elastic relining materials and the denture acrylic. Simple application, without any time-consuming removing by grinding. No residues, no interaction during repeated relinings.

**OUR NEWEST
MOLLOPLAST-B ACCESSORY!**
